Technology

Traditional Drapery

Technical Components

- IFR Molton drapes for the main hall to act as large masking drapes.
- 14,500sqm of drapery made up from Qty 92 drapes at 5.9mW x 15mH & 42 drapes at 5.9mW x 19mH.
- Finished with black reinforced eyelets at the header and hemmed side and base. Due to these being made from polyester they can be washed and reused seasonally to ensure a high level of quality and finish.

Challenges & Successes

Due to global shipping delays and the opening ceremony of the DEC timeline we had to manufacture the full drapery in under 5 weeks. To ensure there were no delays on site we provided split shipments so onsite the installation could be alongside the manufacture of the drapes.
